

TANNREDOX

**Powder tannin, antioxidant,
for winemaking process**

CHARACTERISTICS

TANNREDOX is a hydrolysable gall tannin, of a light brown color, easily soluble in water or wine.

Taste wise, it presents a fair grade of astringency.

TANNREDOX possesses a low surface charge.

APPLICATIONS

TANNREDOX is indicated for the treatment of grapes, musts and wines, where it strengthens the structure and performs a strong antioxidant and antioxidase activity. In the event the wine wouldn't have an adequate structure, good practice would be a treatment with TANNREDOX, which would bring a certain degree of complexity and help with its good preservation.

DOSAGE AND INSTRUCTIONS FOR USE

5 - 15 g/hL in fining or for correction of its organoleptic characteristics.

Dissolve the product in water or wine in a 1:10 ratio and add it to the mass in a homogeneous manner.

NOTE: lab test in small scale are suggested in order to determine the optimal dosage and avoid undesired colloidal effects.

COMPOSITION

Blend of tannins of hydrolysable type.

PACKING

25 kg bag
