

# TANBLANCHE CRU

Powder Tannin for Protection

## CHARACTERISTICS

TANBLANCHE CRU is a special blend of tannins in powder, light brown color, easily soluble in water or wine.

TANBLANCHE CRU has a high surface charge.

## APPLICATIONS

This is a tannin of strong antioxidant and antioxidase capacity; it reacts quickly with oxygen, protecting wines and musts during all the process phases, from crushing to bottling. Ideal for fining and racking.

This is a type of tannin expressly designed to maintain the aromatic freshness in wines, increasing their shelf life. It is also able to enhance the tannic structure, giving sapidness and persistency. During the fermentation and refining phases, it develops the formation of aromatic precursors typical of white flowers and citrus, contributing to the complexity of the wine's bouquet.

## DOSAGE AND INSTRUCTIONS FOR USE

5 - 15 g/hl, both for white and red wines.

Dissolve the product in water or wine in a ratio of 1 : 10 and add it to the mass in a homogeneous manner.

**NOTE:** we suggest laboratory tests for defining the best dosage and avoid undesired colloidal effects.

## COMPOSITION

Blend of tannins of the hydrolysable and condensed type.

## PACKING

1 kg packs.

This product is not considered dangerous therefore a material safety data sheet is not necessary.
