

STERISOL 600

Concentrated liquid sulfiting agent

CHARACTERISTICS AND APPLICATIONS

STERISOL 600 is a concentrated and ready to use quality liquid sulfiting agent. STERISOL 600, apart from its "antiseptic" and "antioxidant" actions, intervenes positively in fermentations due to the free amino nitrogen (FAN) supplied.

STERISOL 600 is different from other sulfiting agents in that it has a greater purity, concentration and clearness.

STERISOL 600 is furthermore a valuable oenological coadjuvant because:

- ⇒ Respects the must and wine quality
- ⇒ Is easy to use because it is ready to use
- ⇒ Is adaptable for use with dosing pumps
- ⇒ Is effective and safe
- ⇒ Is cost effective

STERISOL 600, because of its characteristics, can be advantageously used starting from the vinification (directly on grapes, in the press, in the must and in the wine) up to the bottling.

DOSAGE AND INSTRUCTIONS FOR USE

STERISOL 600 is a modern and practical alternative to sulfur dioxide in cylinders and to potassium metabisulfite.

STERISOL 600 comes in a liquid form and it's ready to use either manually or through dosing pumps.

10 g/hl of STERISOL 600 yields around 50 mg/l of SO₂ and increases FAN Content by 15,4 mg/l

COMPOSITION

Ammonium bisulfite 70%, demineralized water as needed to 100%

CHEMICAL ANALYSES

SO₂ content: 630 g/L; FAN supply: 154 g/l; Sulfates: <1,5%

PACKAGINGS

1300 kg big containers, 25 kg drum

STERISOL 600 is a product subject to regulated use.
